Vue.js

Event Handling

Methods

```
<script>
export default {
  methods: {

  }
}
</script>
```

Methods

```
<template>
  <button @onclick="hello"></button>
</template>

<script>
export default {
  methods: {
    hello() {
      alert('Hello')
    }
  }
}
</script>
```

Shorthand

```
<button @onclick="hello">Tombol</button>

<button v-on:onclick="hello">Tombol</button>
```

Access data di dalam methods

```
<script>
export default {
  data: () => ({
    message: 'Hello World!'
  }),
  methods: {
    hello() {
      alert(this.message)
    }
  }
}
</script>
```

Mengubah data melalui method

```
<script>
export default {
  data: () => ({
    message: 'Hello World!'
  }),
  methods: {
    hello() {
      this.message = 'Hello Universe!'
    }
  }
}
</script>
```

Passing argument ke method

```
<template>
  <button @click="hello('Tekan tombol')">Tombol</button>
</template>

<script>
export default {
  methods: {
    hello(message) {
      alert(message)
    }
  }
}
</script>
```
